

## AUTOMATIC SEPARATION OF THE WHEAT FROM THE DIGITAL CHAFF WITH SEPPMAIL CLOUD FILTER

### SEPPMAIL.CLOUD.FILTER

Phishing e-mails are becoming more and more sophisticated, spam arrives ever more frequently and the time available to you for dealing with them is becoming more and more limited.

Fortunately, however, you can now outsource e-mail selection. The best method is to use a tool, which automatically sorts the wheat from the digital chaff.

For example, this is done by the SEPPmail Cloud Filter, which uses personalised filtering rules to put a stop to dangerous incoming e-mails, recognises and removes the most recent spear phishing and CEO fraud attacks.

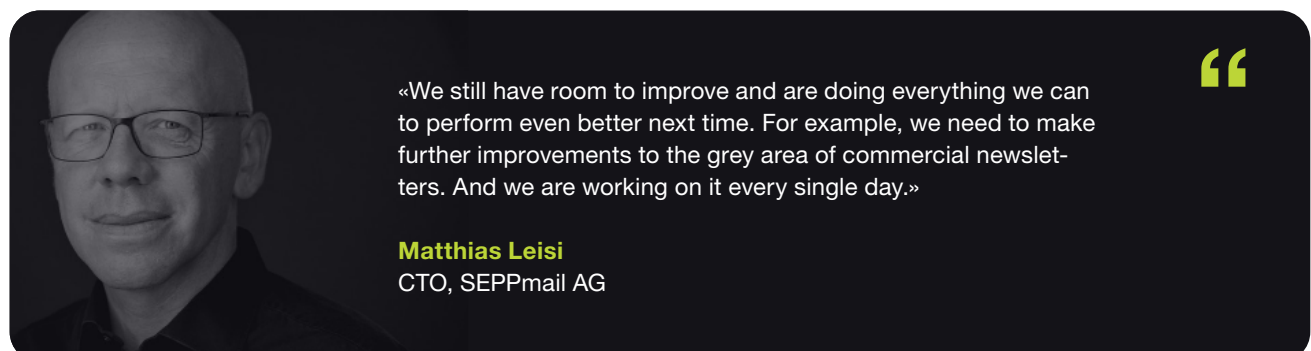

And does it properly.

### GLOBAL BENCHMARK

The experts in the world's leading virus bulletin spam test spoke of an „impressive“ solution and awarded SEPPmail Cloud Filter the following ratings in four test categories:

Overall, SEPPmail.cloud detected every malware, apart from 18 out of 400,000 e-mails. Only two e-mails mistakenly declared as phishing e-mails ended up in the filter and no “clean” e-mails were mistakenly classified as spam.

## METHODICALLY FORWARD LOOKING

It consists of a rigorously networked methodology in carefully programmed tools, which are perfectly calibrated with each other.

We are talking about link tracking and blocking, phishing filtering against drive-by-downloads, automatic upgrading of virus filter signatures, outbound filtering, backscatter mail minimization, spam trap domains (honey pots for viruses), sender reputation management, botnet protection, content fingerprinting, adaptive filtering, bulk mail filtering, office macro scanning, automatic welcome listing, machine learning and artificial intelligence, bit coin extortion prevention, spear phishing protection and CEO scam shield, link tracking, automatic upgrading of anti-virus signatures, backscatter mail minimization, a large spam trap network for the early recognition of spam campaigns and dynamic spam recognition.

## LEGALLY PROTECTED

Nevertheless, the best process model is of no use, if it has a shaky legal base. This is why our legal team relies on audit logs, 1,000 Content Filter rules and SLA for availability and filter performance. To this is added the simple integration of filters and signature encryption.

## USER AND SERVER-FRIENDLY

We make complex things simple. Migration and integration without effort, complete self-service, quarantine reports at configurable intervals, one-click release for reports, direct blocking, ensuring the desired e-mail traffic, proactive information on congested e-mail flow, and last, but not least, relief for the e-mail server.
